Seeking admission to a Master's program in Computer Science to deepen expertise in systems and software engineering.

Education

•B.E in Computer Science and Business Systems *2020-24*
Thapar Institute of Engineering and Technology, Patiala CGPA: 9.39

•Senior Secondary Schooling (XII) *2020*
Salwan Public School, Gurugram 95.6%

Experience

•Cloudera, Inc. *July 2024 - Present*
Software Developer - II Bengaluru

- Integrated kubernetes-sigs/agent-sandbox into Cloudera's AI agent platform by onboarding 7 container images across 3 registries, authoring 6 Helm templates and 15 RBAC rules, and enabling CRD-driven sandbox isolation for secure agent tool execution.
- Built a Kubernetes operator in Go that reconciles 2 custom resource types across 12 reconciliation paths, managing up to 10 K8s resources per workload — with sandbox-aware session lifecycle including automated SandboxClaim cleanup to prevent orphaned warm-pool pods.
- Architected and delivered Git-style versioning for Agentic Workflows in Cloudera Agent Studio, introducing branching, workflow persistence patterns, and end-to-end audit logging, enabling reproducible workflow management and full change traceability.
- Co-designed backup/restore upgrade infrastructure in Cadence with rollback mechanisms, feature flags, and preflight validations, ensuring 100% zero-regression compatibility across diverse Azure and AWS environments.
- Led end-to-end design and onboarding of complex AI Workbench upgrade workflows to Uber Cadence, achieving 100% on-schedule delivery and reducing quarterly customer escalations through robust resource management.
- Designed and launched a dedicated Go/JavaScript microservice for User/Team synchronization, successfully reducing user sync escalations from 3 per quarter down to 0.
- Built an automated Helm chart generation system using Consul Templates across Commercial and FedRAMP environments, eliminating manual chart edits and reducing human configuration errors to 0.
- Automated CML Helm configuration generation and validation via GitHub Actions and Jenkins, implementing schema snapshot management and version increment detection to eliminate manual steps and prevent version tracking errors.

•Cloudera, Inc. *January 2024 - June 2024*
Software Development Intern Bengaluru

- Developed and implemented an idempotent workflow within deployed EKS/AKS clusters to efficiently check access to internet-hosted endpoints, reducing chart installation failures by 60% and providing diagnostic alerts for inaccessible endpoints.
- Orchestrated the migration of a micro-service CRUD application to automated Helm chart generation using Consul and Gonsul templates. This streamlined deployment across diverse environment configurations, resulting in enhanced scalability and deployment efficiency.
- Engineered a micro-service to capture user-generated events within the cloud application, enabling team visibility and facilitating application reviews. Leveraged gRPC technology to communicate with a server and stored these events in a structured database for detailed analysis and optimization.

Positions of Responsibility

•Indian Society for Technical Education, Thapar Chapter *September 2020 - May 2023*
General Secretary Patiala

- Implemented two technical projects with teams of about 30 members each.
- Organized three inter-college events - Colloquium, Hackonix and Quest of the Curious.
- Designed graphic posts for social media handles and helped in managing two events.

•Cloudera Cares *2024 - Present*
Volunteer Bengaluru

- Created braille cards to support visually impaired individuals.
- Volunteered in painting a government school to improve the learning environment.
- Crafted handmade card wishes for underprivileged children.

Personal Projects

•Filmpire

Movie Recommendation System

- Technologies: JavaScript, Node.js, React.js, Express.js, The Movie Database API
- Utilized React.js for frontend development, ensuring an engaging and user-friendly interface and incorporated a movie API for the backend, offering a vast collection of movies with detailed information, ratings, and cast details
- Provided personalized movie recommendations to users, enhancing their movie discovery experience with separate genre tabs, and enabled efficient movie searches, enabling users to quickly access specific movie details

•Student Management System

Backend Database Server

- Technologies: Golang, Mockgen, PostgreSQL, Docker, Kubernetes, Helm
- Developed a backend API server, which can be pinged with requests to store student database, and modify it according to the will of the user.
- Utilized the capabilities of Docker and Kubernetes to ensure no downtime and persistent database, and implemented Helm to ensure easy deployment of the application.

•Noterrrr

Note Making Application

- Technologies: JavaScript, Node.js, Express.js, React.js, MongoDB
- Created an intuitive web application, enabling users to efficiently create and manage notes, and implemented robust login functionality to ensure data security and user privacy.
- Seamlessly organized and stored user notes for enhanced productivity, and Streamlined user experience with a clean and user-friendly interface.

Skills and Interests

Languages: C, C++, Python, Golang, JavaScript, HTML, CSS
Frameworks: Node.js, Express.js, React.js, Protobuf, Uber Cadence, Mockgen
Deployment Tools: Docker, Kubernetes, Helm
Developer Tools: Command Line, Git and Version Control, Postman, VS Code, Mongoose, Sanity
Cloud/Databases: AWS Basics, Azure Basics, MySQL, Oracle LiveSQL, PostgreSQL, MongoDB
Soft Skills: Synergistic, Result-driven, Well-scheduled, Receptive
Coursework: Object Oriented Programming, Data Structures, Operating Systems, Computer Networks

Achievements and Contributions

•**Merit Award** for securing the first position in my program *2024*

•**Academic Scholarship** from college for being in the top 5% students *2024*

•**Kubernetes SIGS** contributions to agent-sandbox project *2026*
